ProTeam System Support

Lifts organic matter from the bottom of the pool to the surface for easier removal.

Features & Benefits

- Sodium carbonate peroxyhydrate
 - pH 10.5
 - Powerful oxidizing properties
 - Virtually immediate reaction
 - Compatible with all pool surfaces
- Frees pink slime from plumbing and equipment
- Helps to sequester white water mold from pool
 - Raises organic materials to surface
 - Decreases manual labor and time
 - Works with all sanitizers

Application

- Turn Pump off
- Chlorine/Bromine should be 1ppm or less for best results
- Brush and Stir debris up off the bottom of the pool
- To avoid difficult to clean waterline ring add water so that water level is as high as possible
- Add 10lbs of System Support per 10,000 gallons
- Immediately add 3/4lb of pH Down per 1,000 gallons for each pound of System Support added. (7.5lbs per 10,000 gallons)
- As cleaning action begins, water will become cloudy
- Remove debris with a skim net as it surfaces
- Once enough floating debris has surfaced and been removed from the pool (pool is at a state that skimmer basket will not clog up), turn pump on and circulate for 48 hours.
- Closely monitor filter pressure during this period. Backwash only if necessary.
- Begin introducing chlorine 24-48 hours after physical debris has been removed from the water.
